

Slate Engages National Network of Service Centers for Accessory Installation and Service, Powered by RepairPal

- **In an industry first, Slate will offer customers simplified, transparent service through certified RepairPal service centers in the neighborhoods where Slate's customers live.** Slate, the American auto company with a disruptive business model that focuses on delivering radically affordable and customizable vehicles, is redefining how customers accessorize and complete warranty service.
 - **"Slate's OEM partnership with RepairPal's nationwide network of service centers will give Slate customers peace of mind, while empowering independent service shops to provide accessorization and service,"** said Slate Chief Commercial Officer Jeremy Snyder.
- **DIY and open source are engrained in Slate's DNA.** Slate believes that customers deserve the power to customize, accessorize, and repair their own vehicles, backed by the support of RepairPal's network of highly skilled service technicians.
- **Customize onsite.** In case DIY isn't your thing, RepairPal sites will be trained on Slate procedures for accessory installation. Peace of mind meets local expertise.
- **Schedule service through RepairPal at nationwide service points.** No matter where Slate drivers live, they will be close to a service center that can support them to accessorize, and provide service and repairs on their Slate trucks.¹
- **Come in for high-voltage work.** For electrical and battery-related repairs that only a pro should handle, select RepairPal shops will be trained in Slate-specific procedures and able to perform high-voltage service. Over 200 locations across the U.S. are already certified by RepairPal to handle high-voltage repairs on electric vehicles.

¹ Service centers are typically within 100 miles. Warranty service may not be available at all locations.
